I was thinking of creating a psk31 program. I noticed a few DLL's out there for PSK, but I don't like to re-invent the wheel if there was some software that was kick butt already. I would like to see the good points and \"wants\" of some of them so I can get a better idea of whether or not to bother. One of the better ones I found so far was the winpskse223, but there is a ton more features I would like to see. Thanks in advance.

Scott:

<http://www.hamradio.cc/projects/psk31/PSK31.pdf>

This one is very easy to put together. I built this one and it works great. I subsituted the circuit for the PTT with a H11AA1 chip, but have not fully tested it yet. The 2n2222 is probably easier and more readily available to use. Hope this helps. Just about everything can be purchased at Radio-Shack (This is the first). I used some 1/4\" jacks for the wires to and from the radio/computer. This way I could put it all into a little box (from Radio-Shack too). It fits great... If you need anything else, let me know.

Aaron
